

PERFECTA 64 M

PERFECT both in name and in use

EFFICIENCY

Meant to be suitable for any environment

Apartments, villas, stores, lodges, parking garages. It is perfect everywhere.

Wired, wireless or hybrid

A choice for every need.

More savings with a smart home

Optimal energy consumption management through smart home functions.

Data sheet

8-64 zones

4-64 outputs

integrated LTE communication module (2 SIM card slots)

option to connect a TCP/IP module

integrated voice module

63 users

4 partitions

up to 600 m BUS

up to 4 keypads including support for MIFARE® card readers

1 radio controller support

support for remote control keyfobs

up to 8 proximity card readers

up to 7 zone expanders

up to 7 output expanders

Want to use Ethernet instead of cellular?

Choose the PERECTA-IP 64 M - version with integrated TCP/IP module instead of LTE.

SIMPLICITY

Fast and easy configuration

Intuitive PERFECTA Soft software.

System management anywhere, anytime

Free PERFECTA CONTROL mobile app.

Easy operation for everyone

Keypads and proximity card readers for a quick and easy everyday operation.

Meant to be PERFECT(A)

PERFECTA 64 M is the ideal alarm system for every intended use. Whether it is an apartment, a villa, a commercial space, or a parking garage, PERFECTA 64 M always guarantees a high level efficiency.

up to 2000 m range	up to 400 m range

A smarter home for greater savings

Every home becomes smart by combining **PERFECTA 64 M** with building automation devices.

Connected household appliances will be managed via app and keypad according to one's preferences, or automatically by the devices themselves.

In this way, you can have efficient energy consumption management, which will translate into avoiding unwanted losses, and saving significantly on your bills.

Heating management

ART-210
Wireless radiator thermostat

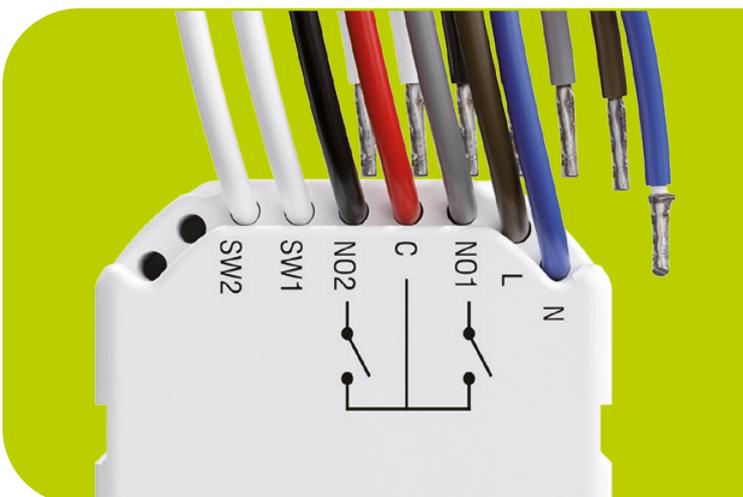

It controls radiators valves automatically. When the opening of a window is detected, the radiators will turn off.

Power output control

ASW-200
Smart plug

It toggles on/off each household appliance and indicates its energy consumption level.

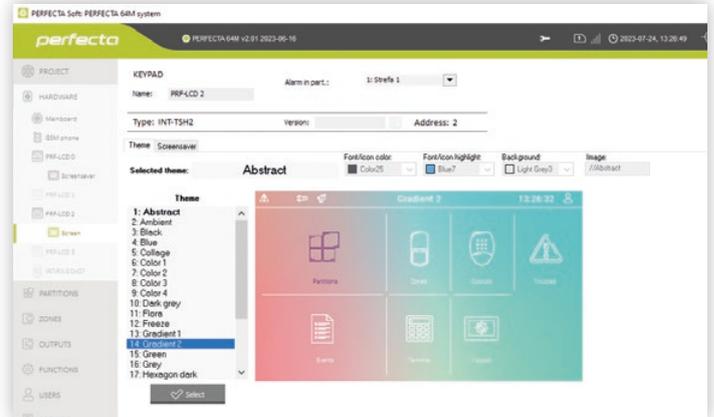

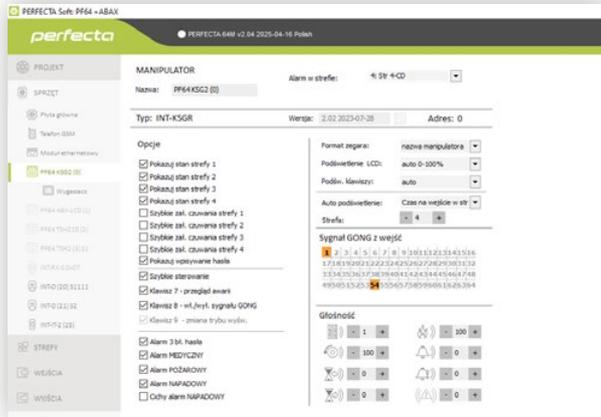

Relays for roller shutters

ASW-210
Wireless in-wall controller

It can lower the shutters, when the alarm system is on and rise them, when system is disarmed.

PERFECTA Soft

Alarm system programming has never been easier. All system settings can be fully configured remotely using the PERFECTA Soft desktop application – no on-site visit required. The built-in LTE module ensures fast data transmission, enabling smooth system updates. Touchscreen keypads can also be configured remotely, including personalized interface settings tailored to user preferences.

INT-KSG2R

Easy local management for everyone

There are many ways to manage the system easily, quickly, and intuitively. Touchscreen or touch-key keypads, as well as traditional keypads, plus proximity card readers integrated into the keypads or available as external units.

Flexibility, speed, and complete personalization

Touchscreen keypads can be fully tailored to both the system's setup and the interior design. The installer personalizes everything – from the graphic theme and icon layout to custom home automation scenarios. This way, the keypad blends perfectly into the space and gives users quick access to the features they use most.

INT-TSH210

The must-have app

You can manage the system and receive all information via push notification anywhere, anytime.

Live feed
from cameras

In the camera's eye

Live camera view

The IP cameras installed in the premise can be added to the app as well, to provide the users complete information about their object – all in the one app.

Smarter, deeper integration

The PERFECTA 64 M alarm system with the ETHM-1 Plus communication module can function as an HTTP notification server and receive alerts sent by IP cameras (for example, after detecting motion) * or other compatible IoT devices.

This allows a signal from the device to trigger a selected zone in the system, opening up entirely new integration possibilities:

- ❖ an IP camera can trigger an alarm when the system is armed**
- ❖ supports up to 16 IP zones - flexible automation options with various IoT devices

* the IP camera must support sending HTTP commands
** requires proper configuration of the third-party device
