ACSP Soft

The **ACSP Soft** program allows the configuration and diagnostics of the **ACSP** fire alarm system based on the **ACSP–402** control panel. Configuration of the system is possible once level 3 access to the control panel has been obtained.

- compatible with Windows 10/11
- possibility to program **ACSP–402** control panel and other system devices
- identification and verification of devices in the system
- possibility to prepare a setup file for the control panel in advance (off–line)
- graphic mapping of the system structure
- editing of names of individual loop devices, zones, inputs and relay outputs
- editing of the message displayed on the LCD screen during supervision
- readout of the system events memory
- alarm memory readout
- option to export the readouts of the event memory and alarm memory to a CSV file
- direct connection to a computer via a control panel USB port
- option to generate system test reports
- option to export the setup information to a file, e.g. PDF
