KNX-USB Soft

The KNX–USB Soft program allows you to switch the KNX–USB interface to the bus logging mode, in which the log of events generated on the KNX bus is saved to the non–volatile memory of the device (up to 350 000 events).

Features:

- possibility to switch the KNX–USB interface to the bus logging mode
- restoring the history of events – export data from the interface memory to a CSV (Excel) or XML (ETS) format
- possibility to clear the non–volatile memory of the interface
