

VERSA CONTROL

The **VERSA CONTROL** application enables remote management of the alarm system based on the **VERSA** and **VERSA Plus** control panels, which are designed to protect small and medium-size premises, e.g. apartments. Functionality of the application makes it a handy tool for checking the system status, including zones and outputs, as well as for viewing the current troubles and all system events. The **VERSA CONTROL** application also offers the notification function using PUSH messages. Because this service runs in the background, the recipient is notified in real time.

Furthermore, the way of connecting to the control panel is innovative in the case of **VERSA CONTROL** application. It is extremely simple, since it does not require knowledge of the IP address and port of the control panel, but only the MAC address of the integrated ETHM module (**VERSA Plus LTE**) or of the **ETHM-1 Plus** module, which is connected to the control panel (**VERSA 5/10/15**), and the panel ID, which can be quickly and easily read on the keypad at the user level. This eliminates the need to configure network settings in the premises devices.

Program features

- control of **VERSA/VERSA Plus LTE** alarm system:
 - arming and disarming
 - checking system status
 - checking zone status
 - checking output status
 - viewing current troubles
 - viewing all system events with filtering capability
- PUSH notification with individual configuration capability
- ability to show video from cameras (Android, iOS)
- quick and easy configuration
- possibility of using secure, encrypted communication with the system via the SATEL connection setup service*
- intuitive user interface
- export of control panel's data through QR code (Android, iOS)

Hardware requirements

- **VERSA Plus LTE** v1.05 or newer
- **VERSA 5/10/15** v1.05 or newer and **ETHM-1 Plus** module v2.01 or newer

Note:

- **VERSA CONTROL** application uses the access to smartphone's camera only to scan QR codes.
- The user data stored in QR code are encrypted. The QR code is protected by a user-defined password.
- Moreover, **VERSA CONTROL** application is not: collecting, processing and storing any other user data, which potentially can be available on the user's smartphone.
