Virtual APSP

The **Virtual APSP** application enables the remote preview of the fire alarm system status using a mobile device or a computer. It is available for Android, iOS, Linux and Windows operating systems. The communication between **ACSP–402** control panel (with **ACSP–ETH** module connected) and application is encrypted.

- remote preview of the **ACSP** system status
- preview of:
  - information about alarms, faults and disables
  - alarms and other events history
  - list of current faults, disables and tests
- audible alarm signaling
- possibility to activate the function of sending a diagnostic report in the control panel
